

F14

**Specially optimised
performance for forklifts**

The F14 forklift gas specially
engineered for delivering optimal
performance for forklifts.

**Industries
served:**

Industrial

Warehousing

why F14?

Specially optimised for usage with forklifts with lower maintenance cost. Suitable for dirt and odour-sensitive product movements.

Benefits of F14

Higher forklift utilization with less cylinder exchange frequency

Operational excellence with consistent power delivery

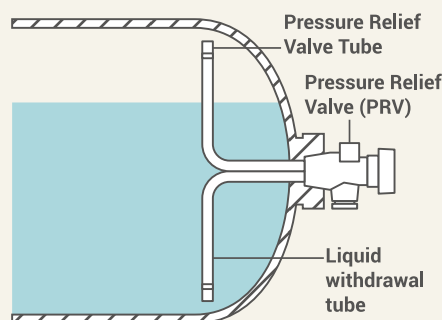

Dramatically reduces maintenance cost and maintenance downtime

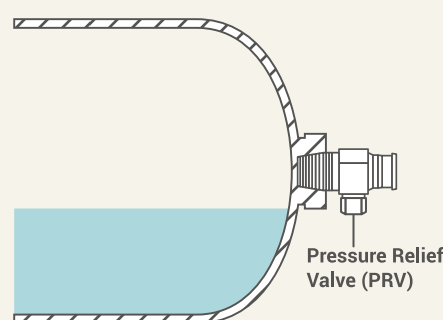

Safe operation

Forklift Gas

Household Domestic Gas

The Key Differences

F14 pressure relief valve tube is in vapour phase to ensure no liquid LPG is discharged when the cylinder is over-pressurized. The liquid withdrawal tube in liquid phase to ensure liquid withdrawal during operation, resulting in consistent power delivery and maximum product utilization. Unlike F14, household domestic gas is not designed to be used in a horizontal position, thus leading to incomplete extraction and potential unsafe conditions.

F14

optimised performance

with maximum safety
